

AZUD LUXON

AZUD LUXON LCA

Automatic hydraulic screen filters suitable for all applications, and available in a wide range of micron sizes, all with the same high quality guarantee of AZUD.

There are solutions available for working with pressures higher than 1 bar / 145 psi or saline water. Control unit is included.

TECHNOLOGY

AZUD LUXON filters continue to supply filtered water without interruption during the flushing cycle.

The water flows through the inlet (1) and enters the inside of the filter element.

The water then passes through the screen (2), and the particles are retained on the inside of the filter element (screen). The filtered water then flows out through the outlet (3).

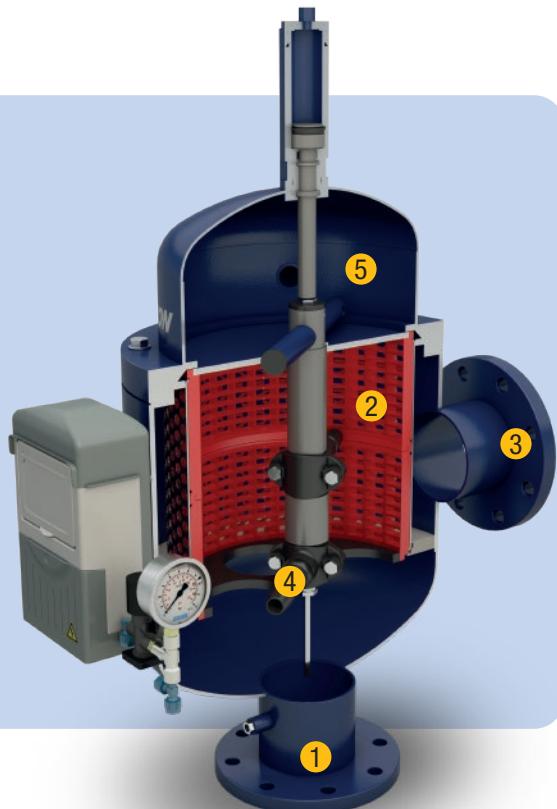

When the pressure differential from inlet to

outlet of the filter reaches the pre-selected level the flushing cycle starts (ΔP). A hydraulic valve opens in the drain port, which initiates suction in the inner nozzles (4). This, along with the helical movement up and down the screen sucks the captured particles into the waste flow, and this is expelled out the drain port (5).

The length of the flush cycle is pre-determined by the control unit. When the cycle is complete the flush valve closes and the flushing ends. The flushing process uses a minimal amount of water.

ADVANTAGES

- ✓ **Energy Efficient:** The consumption of water in the flushing cycle is minimal.
- ✓ **Wide selection of screens:** Screens available from 80 to 1000 micron. (PVC or molded PP support).
- ✓ **Versatility:** Inlet/Outlet from 2" to 10" // 50-250 mm.
- ✓ **Resistance:** Temperatures to 60 °C (140 °F).
- ✓ **Large screen area:** Up to 7200 cm² (1116 in²).
- ✓ **Resistant material:** The screen is manufactured in high quality stainless steel.
- ✓ **Time saving:** The filtration process and the flushing cycle occur simultaneously.
- ✓ **Easy installation:** The filters are delivered to be installed.

MATERIAL

Housing-Lid	Epoxy-Polyester coated carbon steel S-235-JR EPOXY-POLYESTER coated)
Filtration Element	Stainless Steel 316L screen PVC or molded PP support structure
Cleaning Mechanism	Stainless Steel AISI-304 scanner
Seals	NBR
Exhaust Valve	Reinforced Polypropylene

Battery or 220 V AC control unit included.
Max. Pressure 10 bar / 145 psi • Min. Pressure 2.5 bar / 36.3 psi
Max. Temperature 60 °C / 140 °F

The flow rate given by filter conditions is the frequency of the flushing activation.

Maximum recommended flow rate: 125 micron and water good quality.

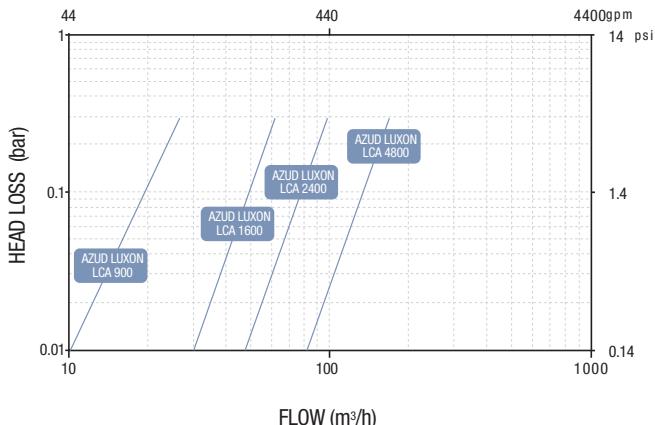

Min. flushing pressure: 2.5 bar / 36.3 psi in outlet manifold.

Ask for other filtration grades.
